

POS 33

POS 33 Payment Terminal

Innovative solutions for parking lot operators

The POS 33 payment terminal can be used for all cashier applications including exit pay, central pay, and valet parking.

The compact modular design makes it easy to fit in tight, manned spaces like valet podiums, cashier booths, and kiosks.

The unit has an integrated credit card reader, RFID reader, barcode scanner, cash drawer, receipt printer, and PC with a built-in touchscreen.

A powerful management tool, the POS 33 tracks multiple cashiers using a sign-on/sign-off function at the beginning and end of each shift. Following sign-off, each cashier receives a printed summary of the revenue collected and transactions executed during their shift. The facility manager can run an end-of-day report summarizing all activity per cashier, as well as daily totals. When connected to the Focus Parking Management System, all of this information is duplicated on the server and available for report functions.

Benefits include:

- Built-in PC touchscreen
- Receipt printer
- Credit card reader
- RFID reader
- Barcode scanner
- Cash drawer
- End-of-shift summary report
- Ability to manage multiple cashiers, including individual/group action tracking and reports
